

Dylan Lamar
Cultivate, Inc.

Dylan Lamar is among the leading design consultants of sustainable architecture in the country. He maintains a wide-ranging specialization in high-performance design consultation and “missing middle” housing development and design. With a background in construction and engineering, Dylan began his career designing the first low-income Passive House built in America in 2005. After graduating from the University of Oregon in 2009, Dylan began work with Green Hammer in Portland where he led the high-performance design team for 8 years, serving as both project architect and energy consultant. There he practiced in a highly collaborative design-build atmosphere that has defined his approach to the design process. To date, Dylan has consulted on over 100 Passive House, Net Zero Energy, and other high-performance buildings across America. Through his design of “pocket neighborhoods” and cohousing projects, Dylan has also developed a passion and expertise for the design of socially-nourishing clustered housing developments. In 2018 Dylan relocated to Eugene, established Cultivate, Inc, and began pursuing housing development prioritizing both sustainability and affordability. Ever enthusiastic in sharing his experience, Dylan is a published author, frequent conference presenter, and college lecturer.
